The combination of a busy start to the year and weather-related delays ensured utilisation levels remained high to the benefit of freight levels. An increase in LPG moving transatlantic and long-haul petrochemical movements lifted the earnings of the larger units in our sector. A total of 14 pressure vessels will deliver in 2021 representing a net gain of 3.9% in the number of vessels in the fleet. A 5,000cbm pressure ship delivered from a Japanese Yard during the month and two more pressure ship deliveries are expected in February.
